

This work is include the most zoonotic fish diseases that transmissible to human, that work can be used in medical, veterinary, agriculture and useful for Fish Farm Breeders. It was concerned with zoonotic infectious diseases including the parasitic diseases which form about 80% from all fish diseases. The fish parasites were the basis of all outbreaks that occurs in fish and were always followed and manifested by secondary infection with bacteria and fungi.

Zoonotic Diseases Between Fish and Human
