Abstract

Environmental thought revolves around an integrated ecosystem in which winds are shaped by the interaction of environmental elements. The thought of Imam Ali (peace be upon him) is considered a comprehensive and dynamic embodiment of this concept. Delving into the thought of the Commander of the Faithful (peace be upon him) reveals an integrated ecosystem, both natural and human-made, in which winds stand out as an environmental element that complements environmental interactions and is closely linked to other elements of the ecosystem. This establishes a dynamic system that drives the environment in all its forms. The Imam (peace be upon him) clarified these classifications and their natural and human interactions with the winds.

Keywords: Wind, Ecology, Imam Ali (peace be upon him).
