

# Nutrition Assessment

Virtual Clinical Session  
on 9/6/2020

Sixth Year Medical  
Students

Reference WHO booklets  
guideline

Dr . Sawsan Issa Habeeb

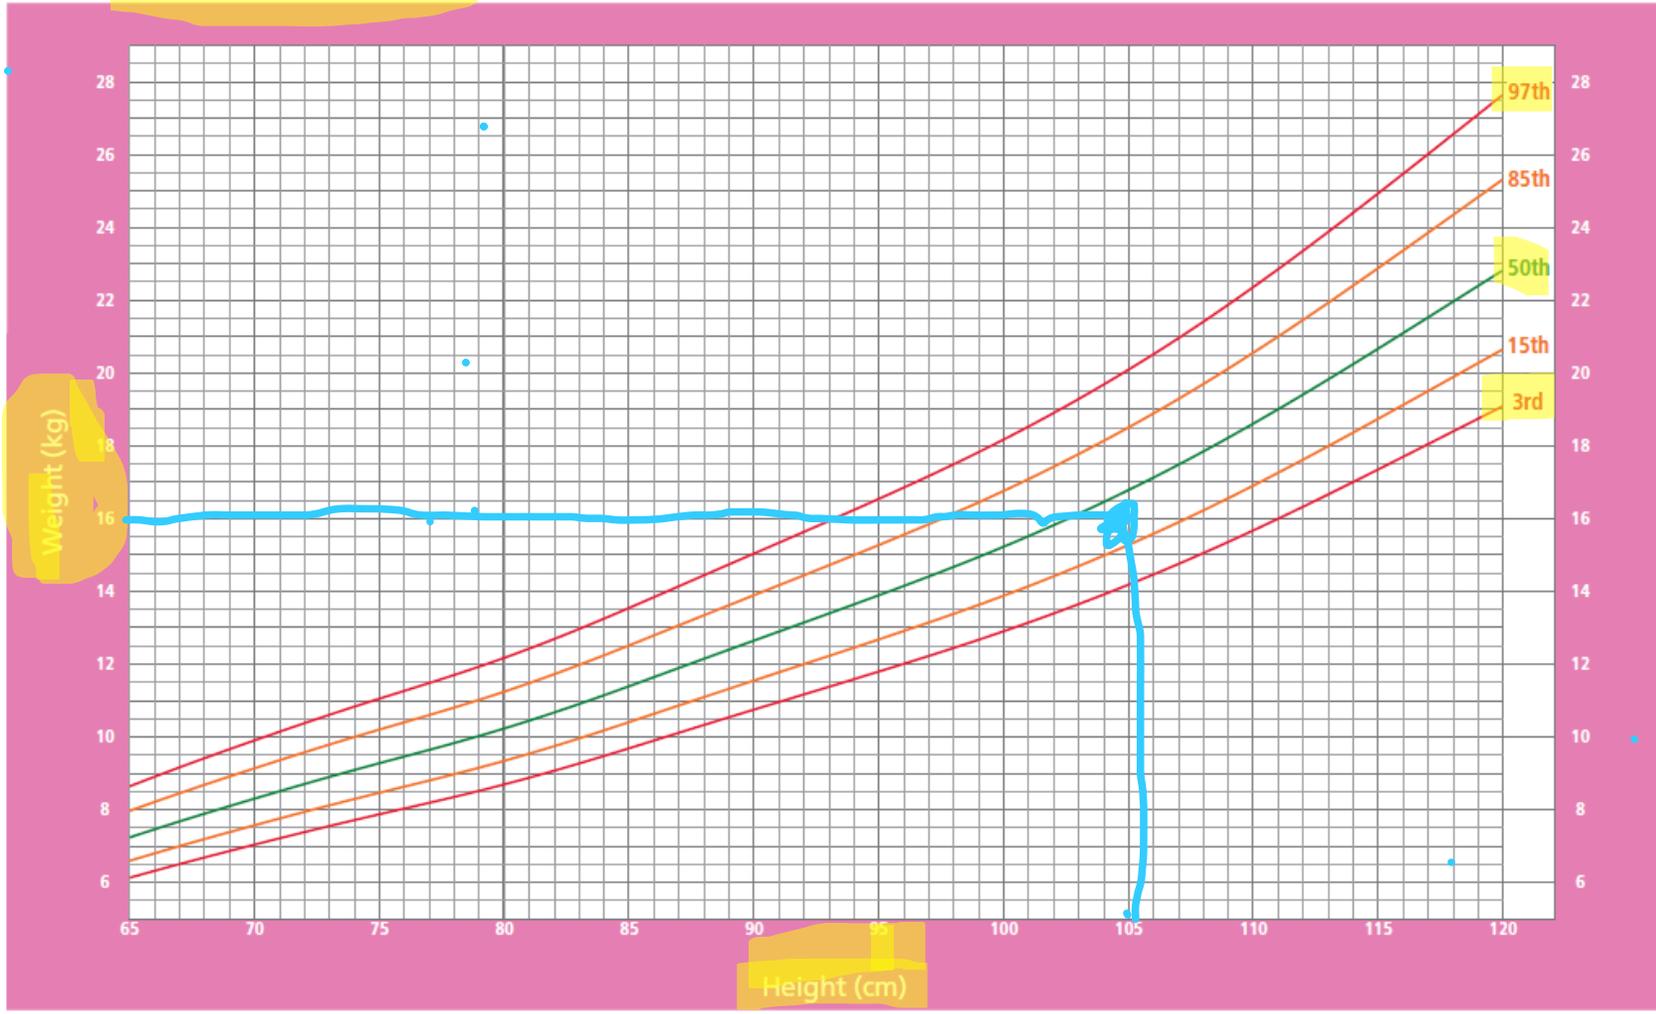

The child's age, sex, and measurements of weight and length or height will be used to calculate the following growth indicators, which will be described in the next slides :

- length/height-for-age (stunting )
- weight-for-age ( underwt)
- weight-for-length/height (wasting )
- BMI (body mass index)-for-age (wasting)

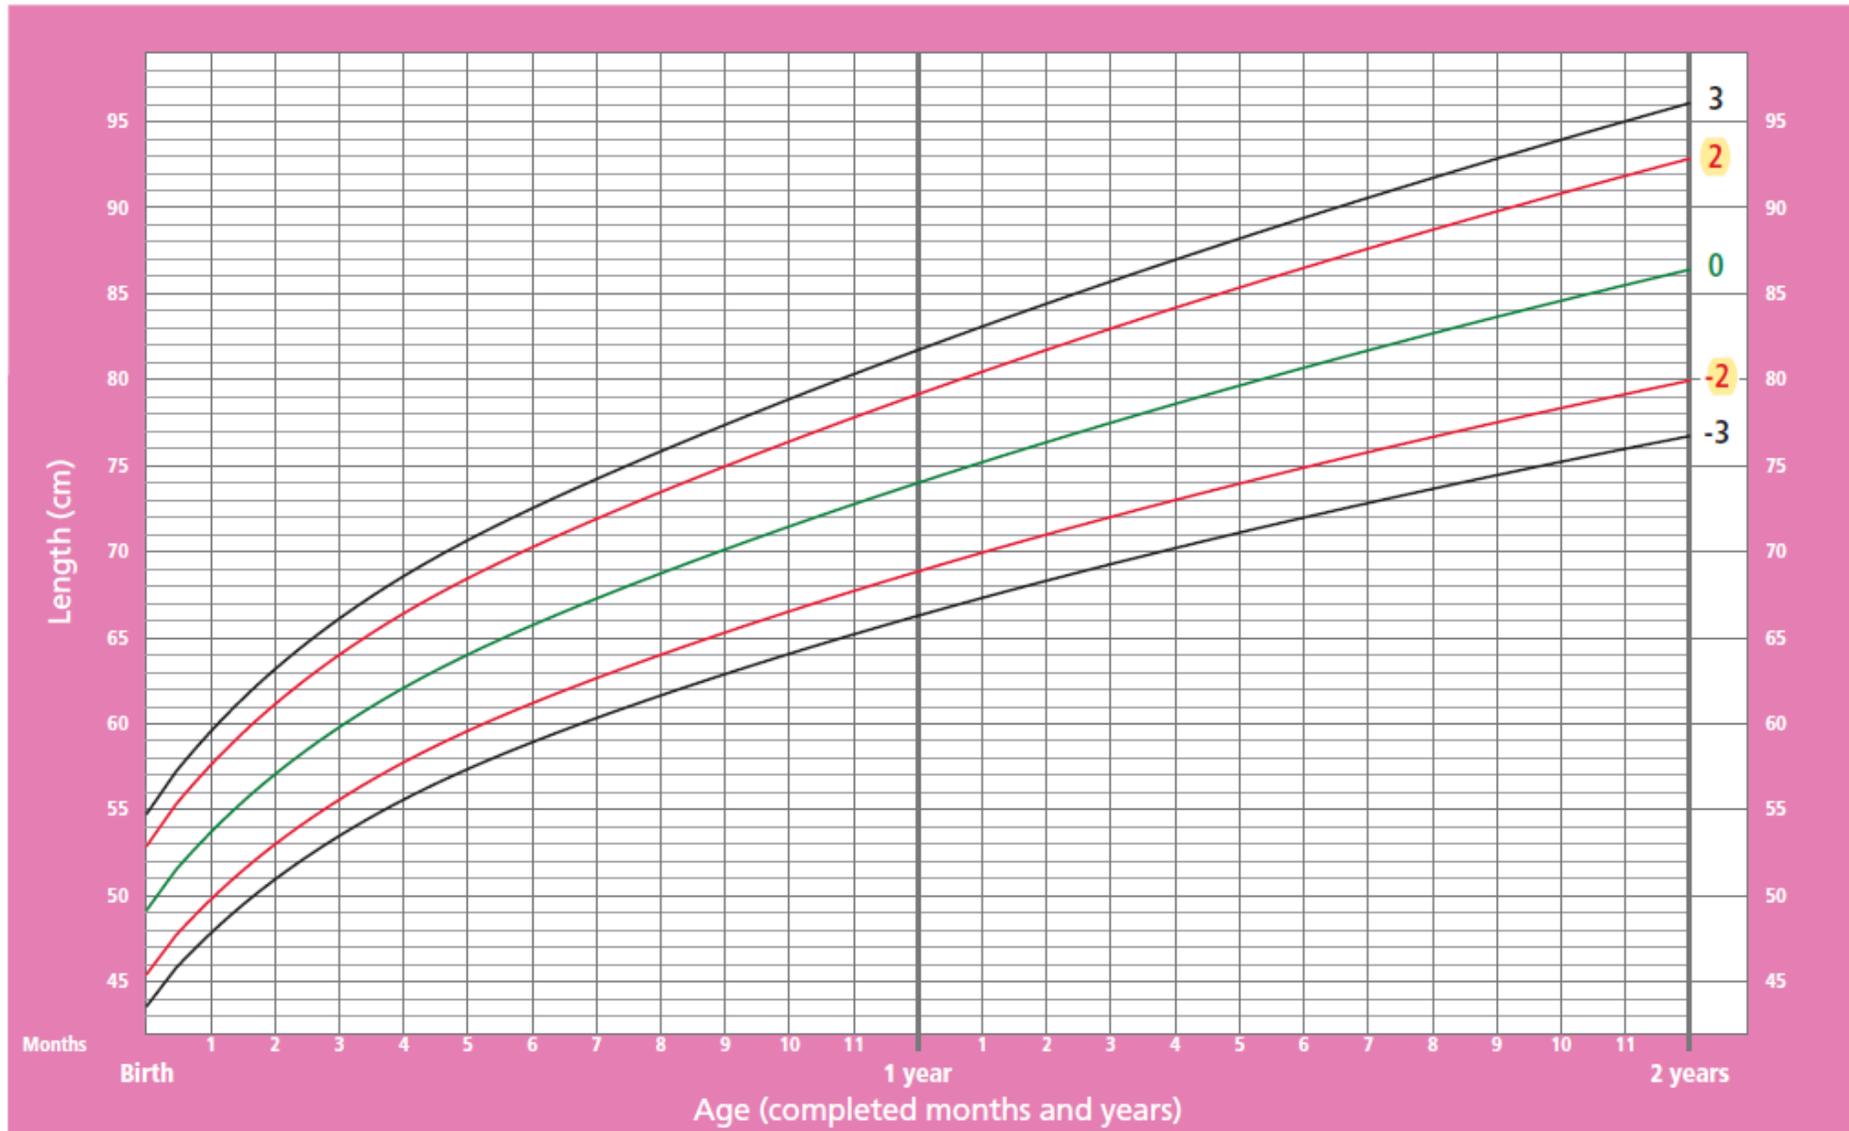

# Weight-for-height GIRLS

2 to 5 years (percentiles)

# Length-for-age GIRLS

Birth to 2 years (z-scores)

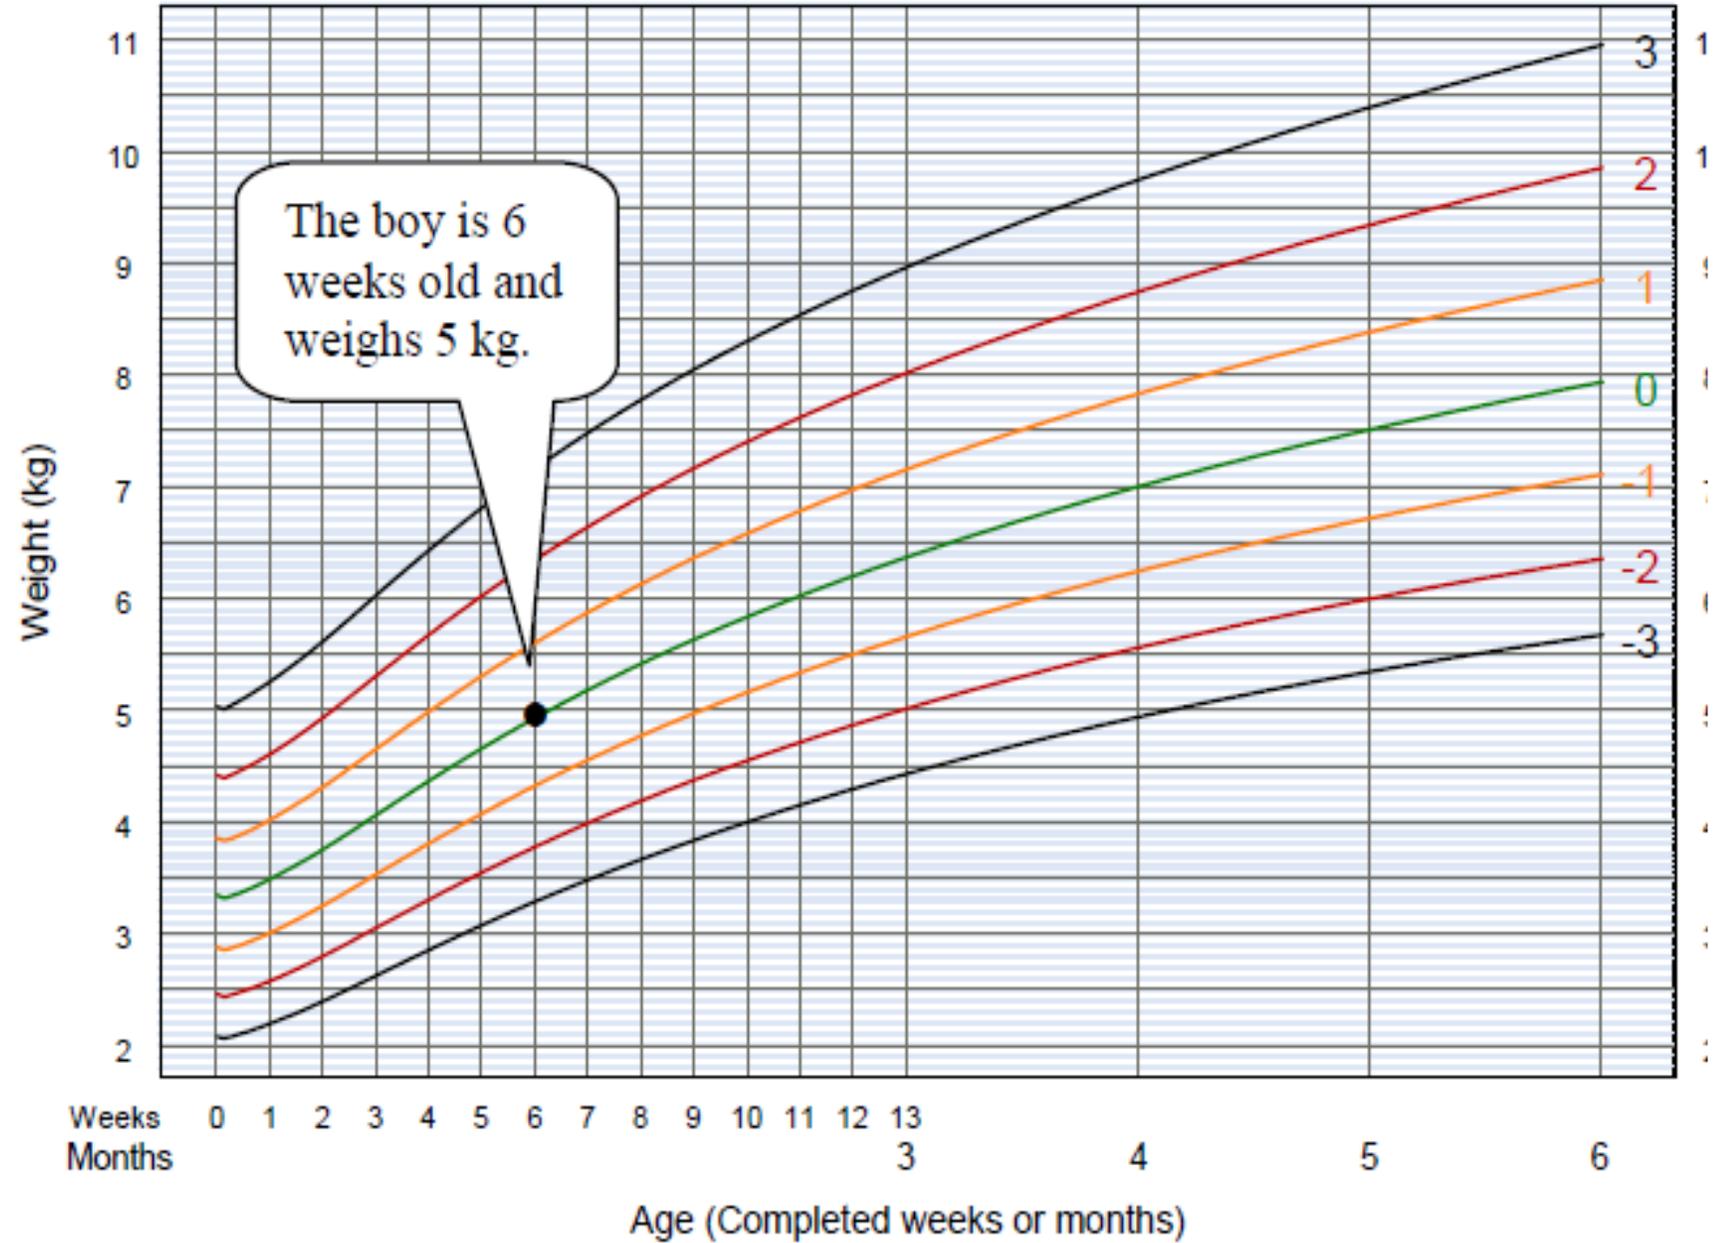

# Growth indicators

Z-Score	Growth Indicator			
	Length/Height for Age	Weight for Age	Weight for Length	BMI for Age
>3	see note 1	see note 2	 Obese	 Obese
>2			 Overweight	 Overweight
>1			 Possible Risk of Overweight (see note 3)	 Possible Risk of Overweight (see note 3)
0	<b>N O R M A L</b>			
<1				
<2	 Stunted (see note 4)	 Underweight	 Wasted	 Wasted
<3	 Severely Stunted (see note 4)	 Severely Underweight (see note 5)	 Severely Wasted	 Severely Wasted

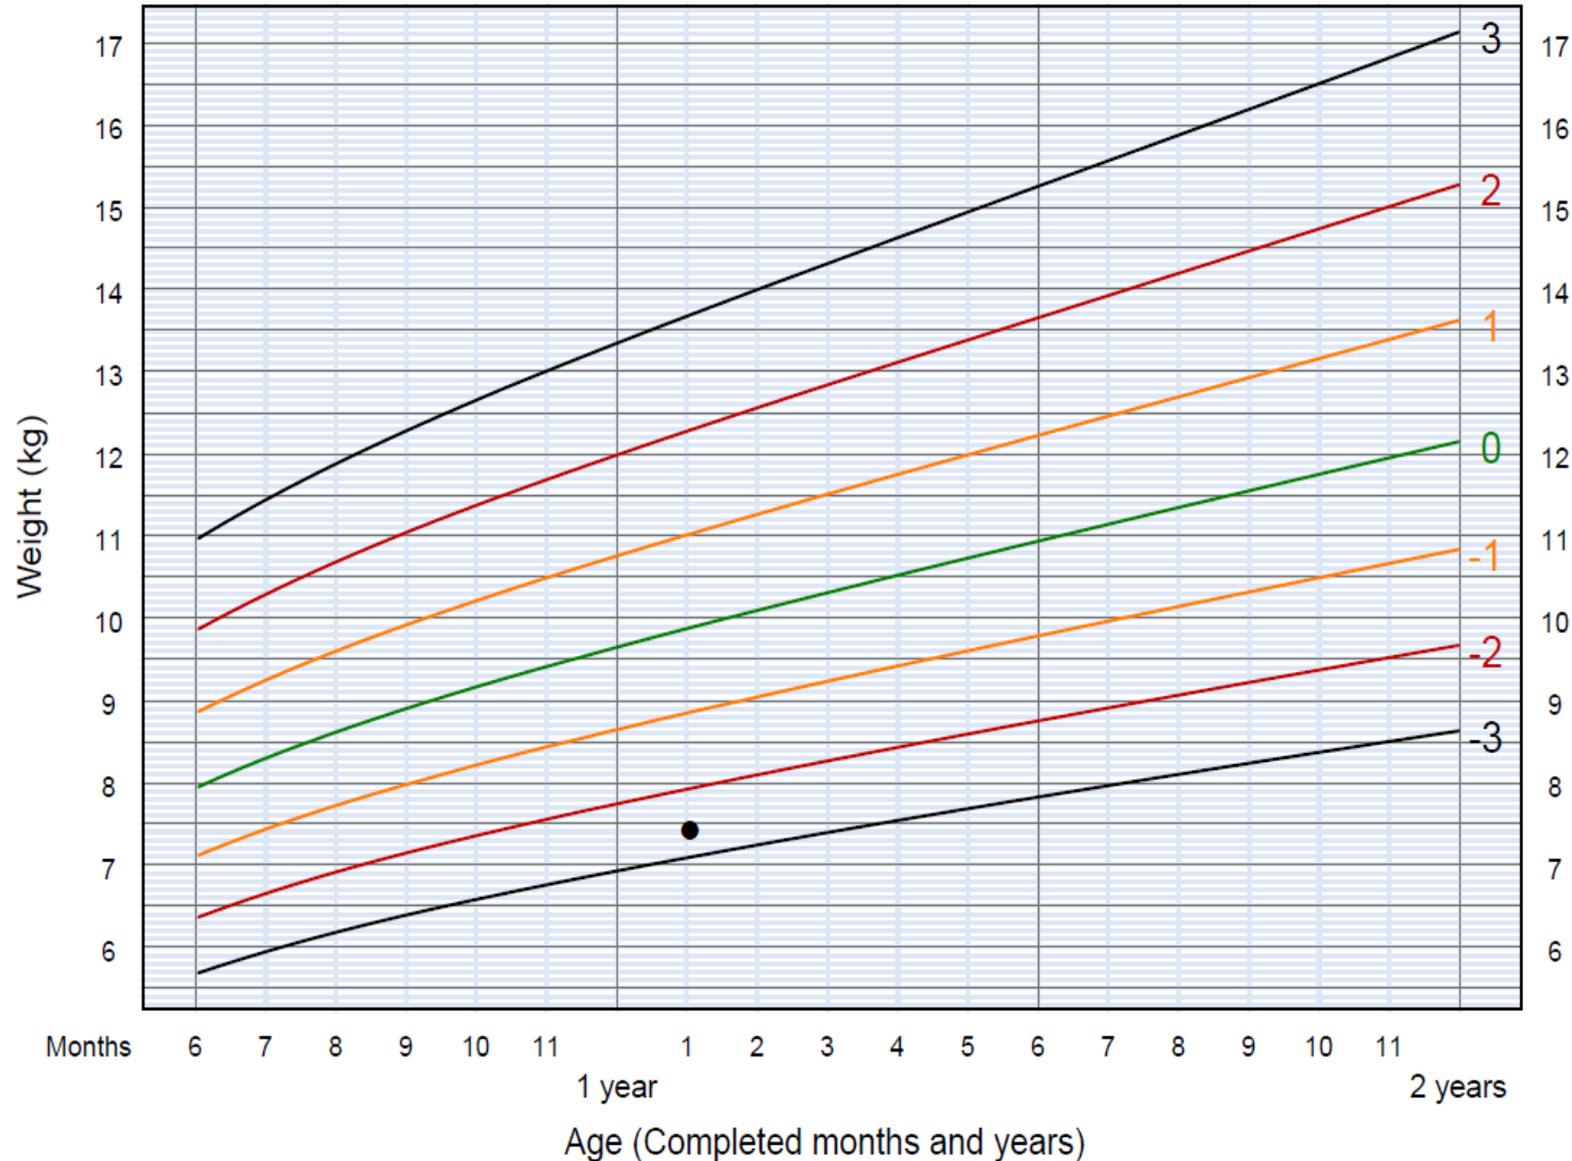

<b>Z-score</b>	<b>Growth indicators</b>			
	<b>Length/height-for-age</b>	<b>Weight-for-age</b>	<b>Weight-for-length/height</b>	<b>BMI-for-age</b>
<b>Above 3</b>	<i>See note 1</i>	<i>See note 2</i>	<i>Obese</i>	<i>Obese</i>
<b>Above 2</b>			<i>Overweight</i>	<i>Overweight</i>
<b>Above 1</b>			<i>Possible risk of overweight (See note 3)</i>	<i>Possible risk of overweight (See note 3)</i>
<b>0 (median)</b>				
<b>Below -1</b>				
<b>Below -2</b>	<i>Stunted (See note 4)</i>	<i>Underweight</i>	<i>Wasted</i>	<i>Wasted</i>
<b>Below -3</b>	<i>Severely stunted (See note 4)</i>	<i>Severely underweight (See note 5)</i>	<i>Severely wasted</i>	<i>Severely wasted</i>

# Interpreting plotted points for growth indicators

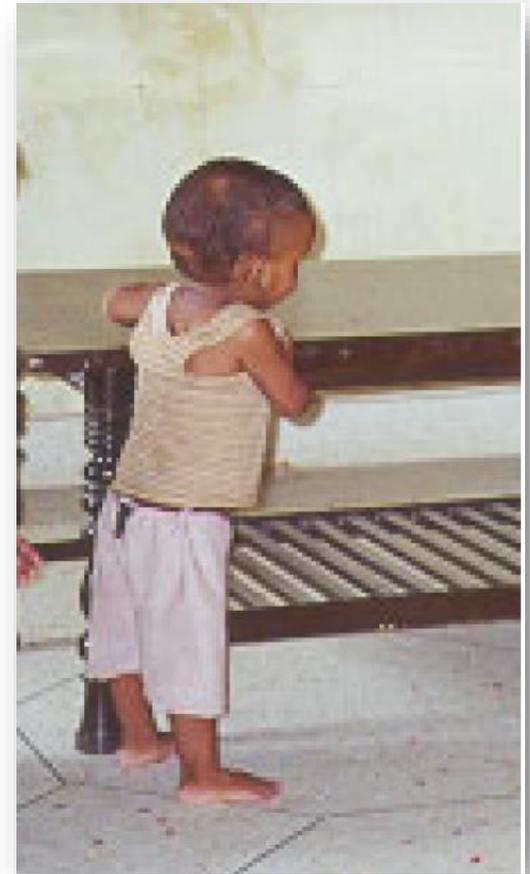

Weight-for-age BOYS  
Birth to 6 months (z-scores)

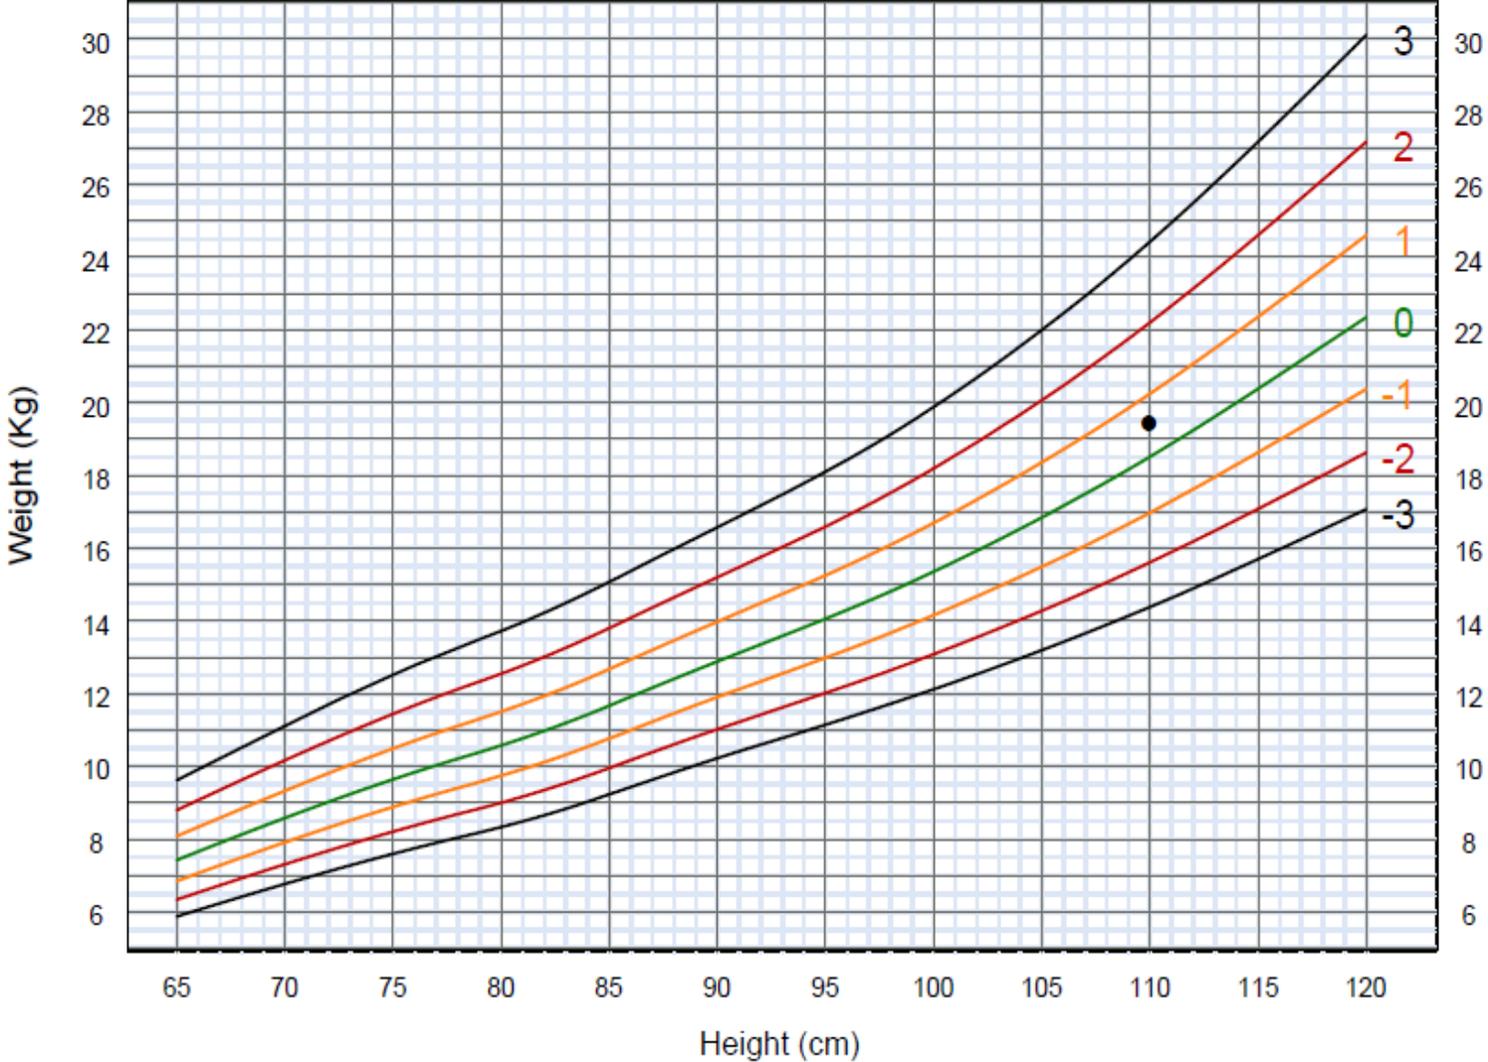

# Weight-for-age BOYS 6 months to 2 years (z-scores)

# Under wt

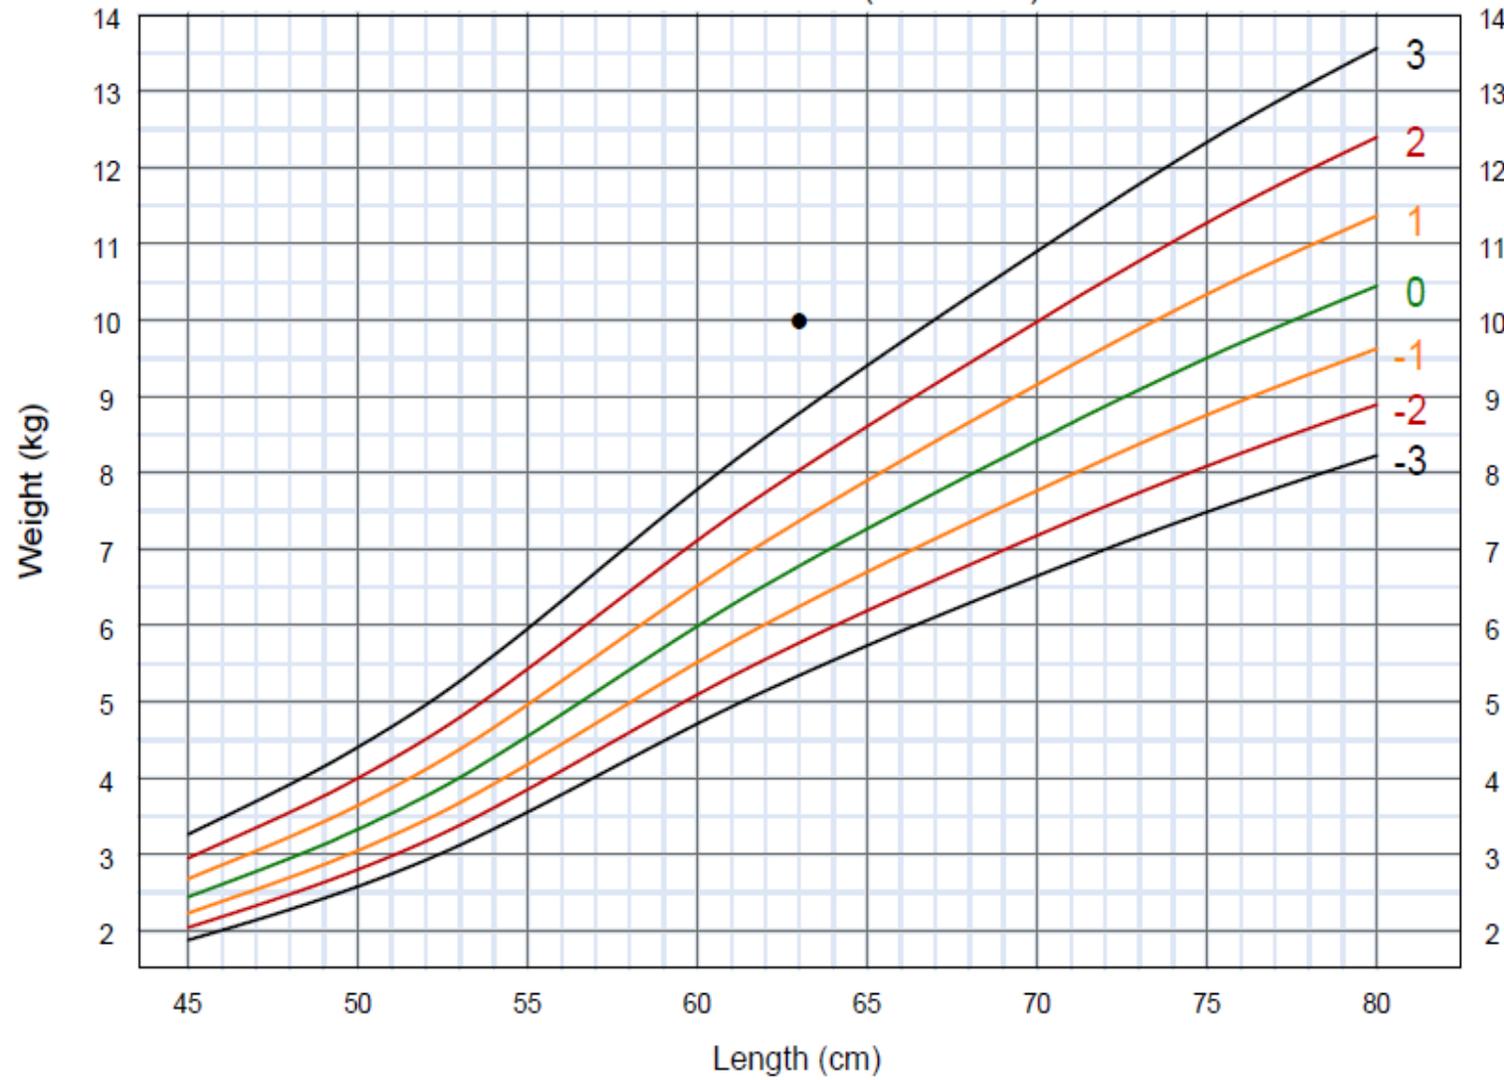

# Weight-for-height BOYS 2 to 5 years (z-scores)

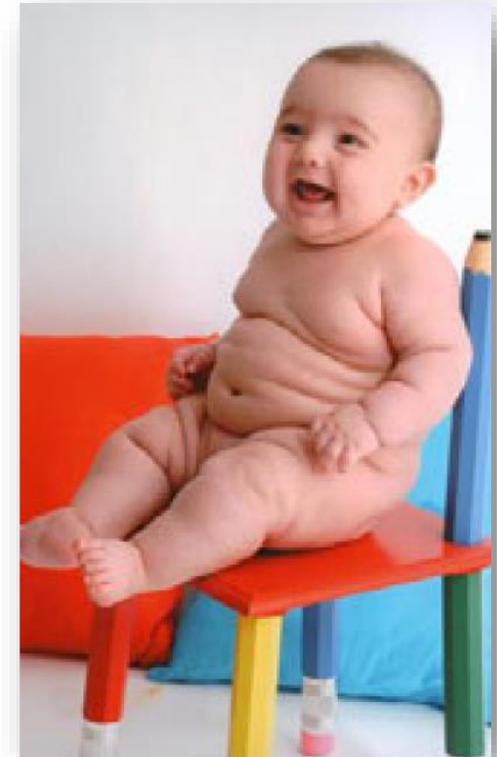

normal

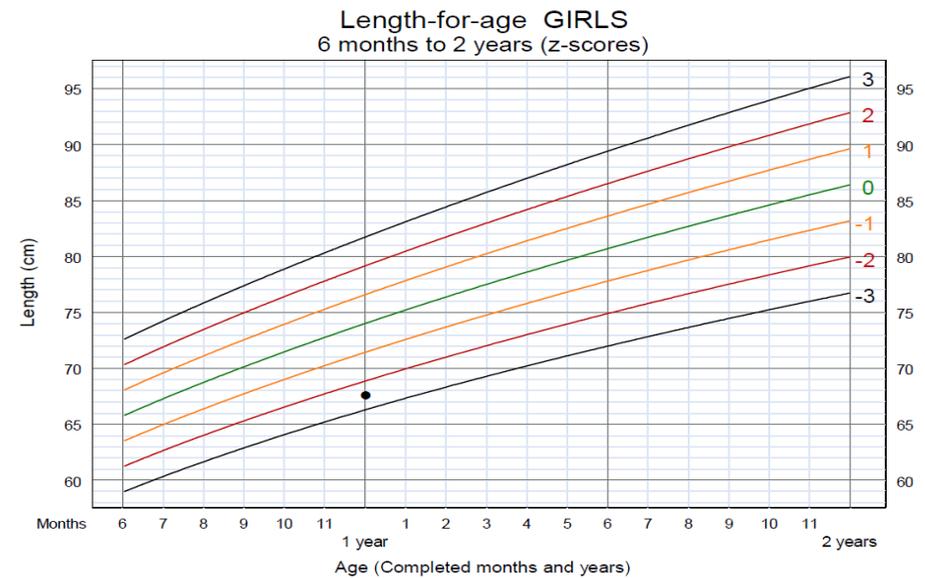

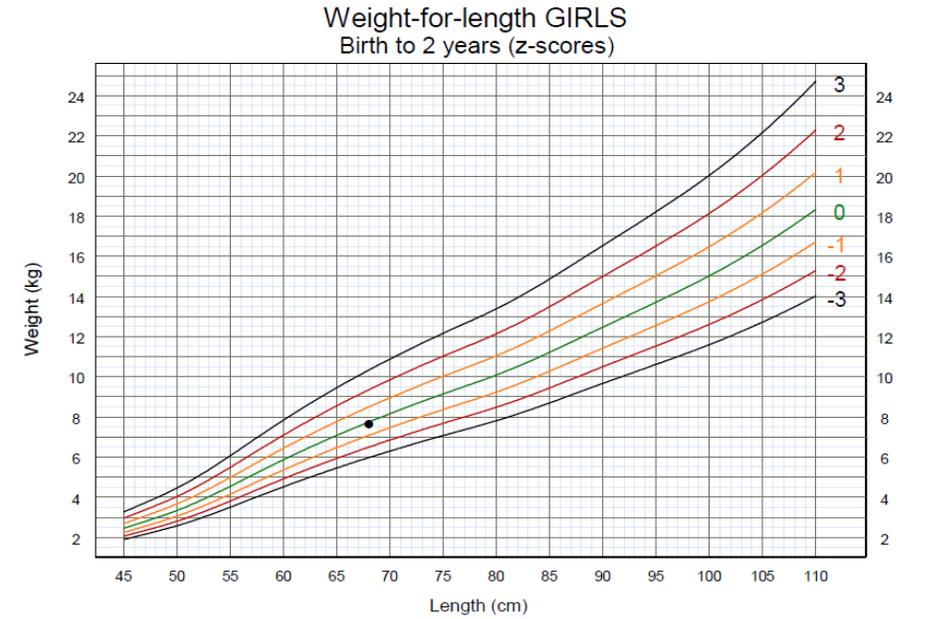

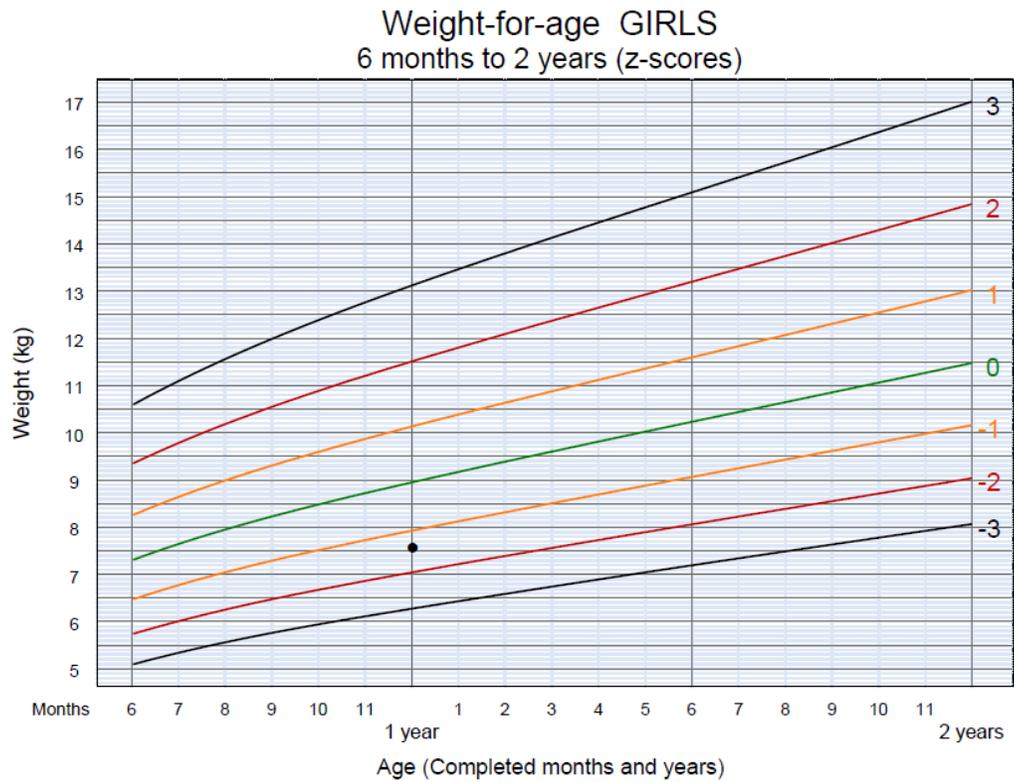

# Weight-for-length BOYS Birth to 6 months (z-scores)

obese

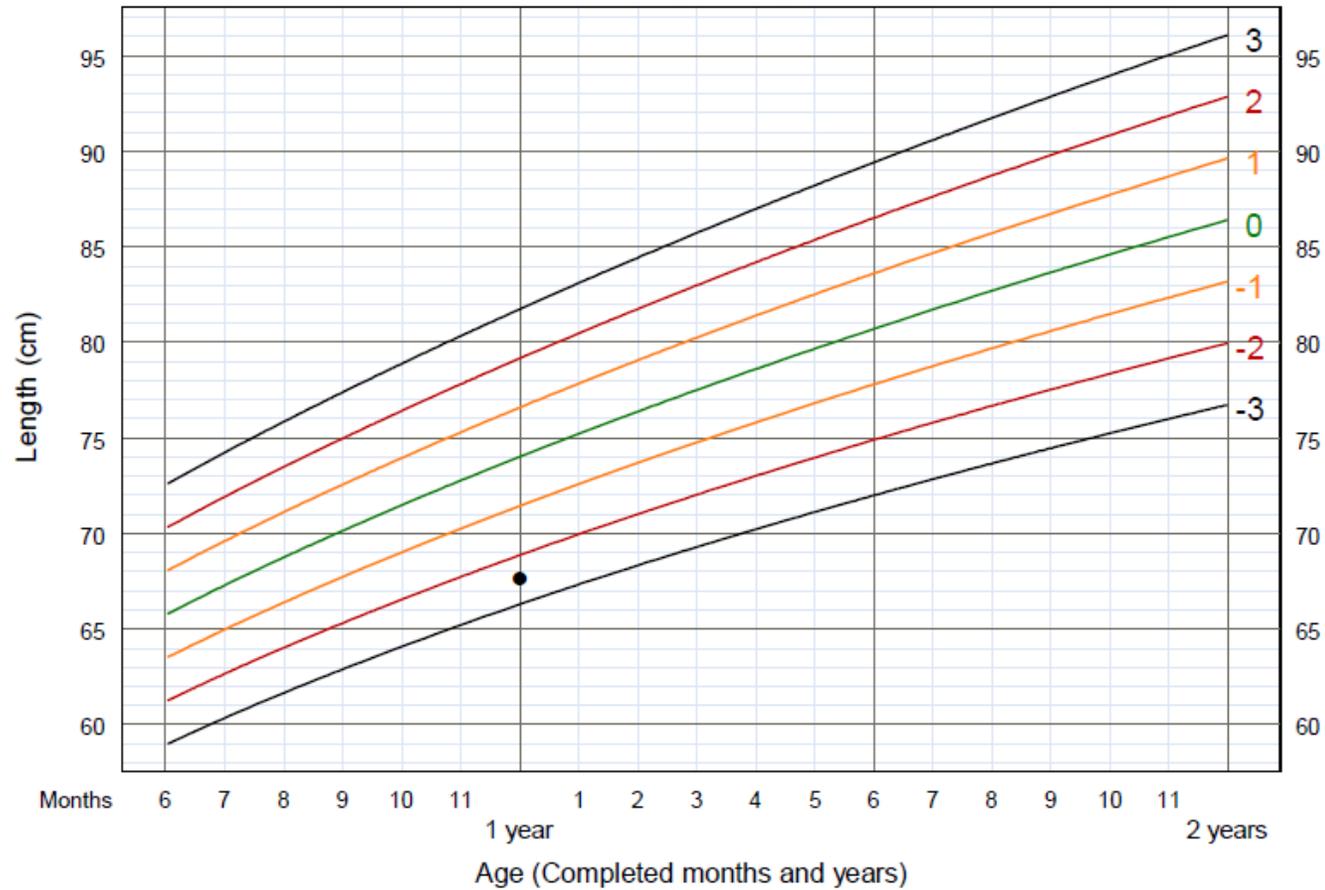

low WFA, normal WFL but  
low LFA shows stunting

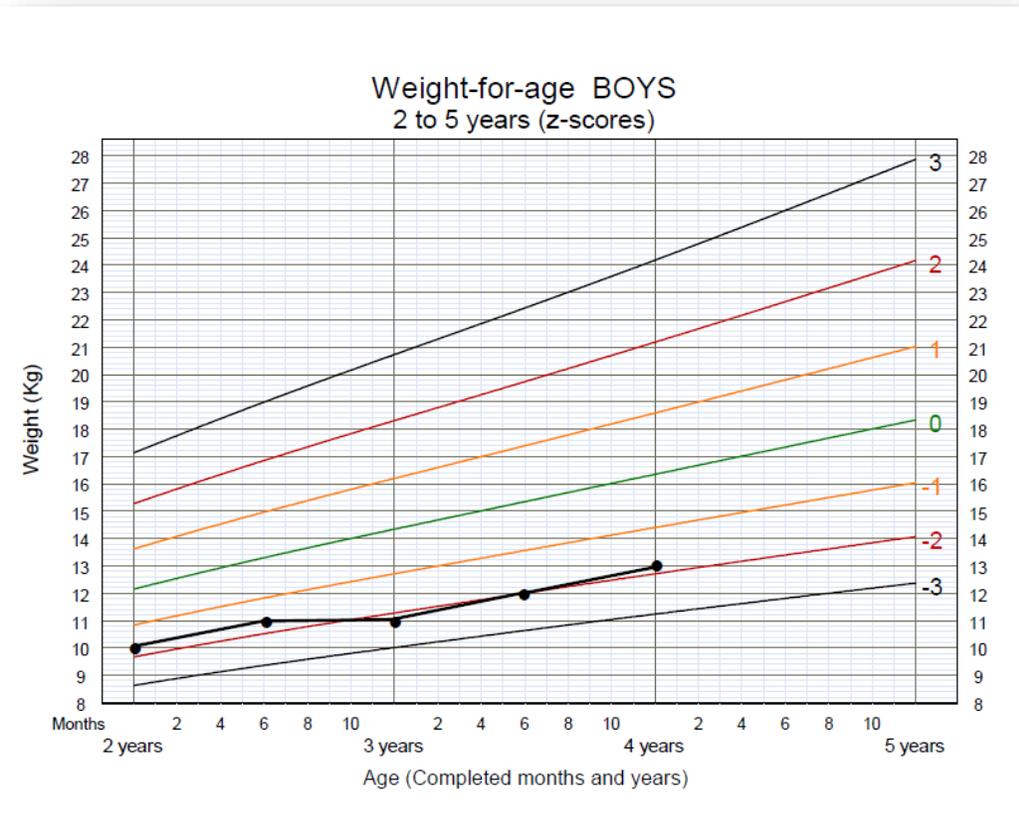

# Stunted

Length-for-age GIRLS  
6 months to 2 years (z-scores)

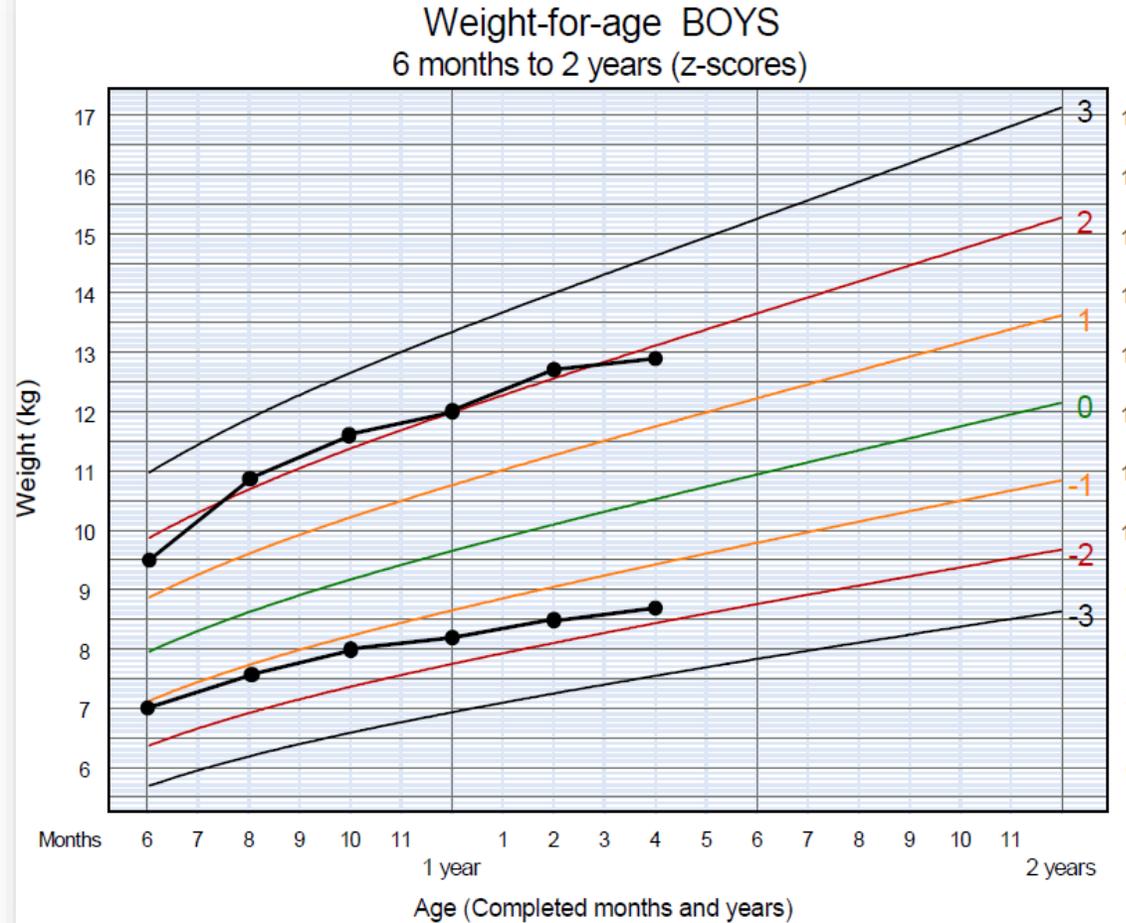

# Interpret trends on growth charts

- “Normally” growing children follow trends that are, in general, parallel to the median and z-score lines.
- Most children will grow in a “track,” that on or between z-score lines
- Roughly parallel to the median; the track may be below or above the median.

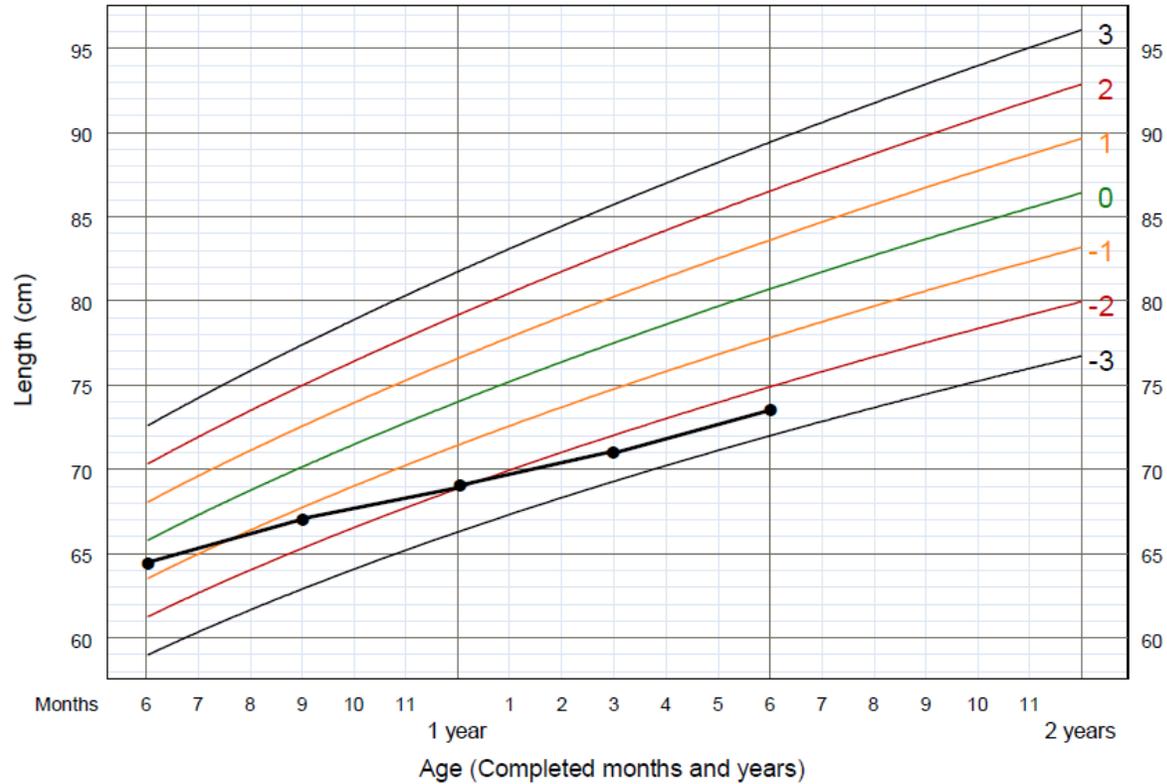

A problem when :

- A child's growth line crosses a z-score line.
- There is a sharp incline or decline in the child's growth line.
- The child's growth line remains flat (stagnant); i.e. there is no gain in weight or length/height.

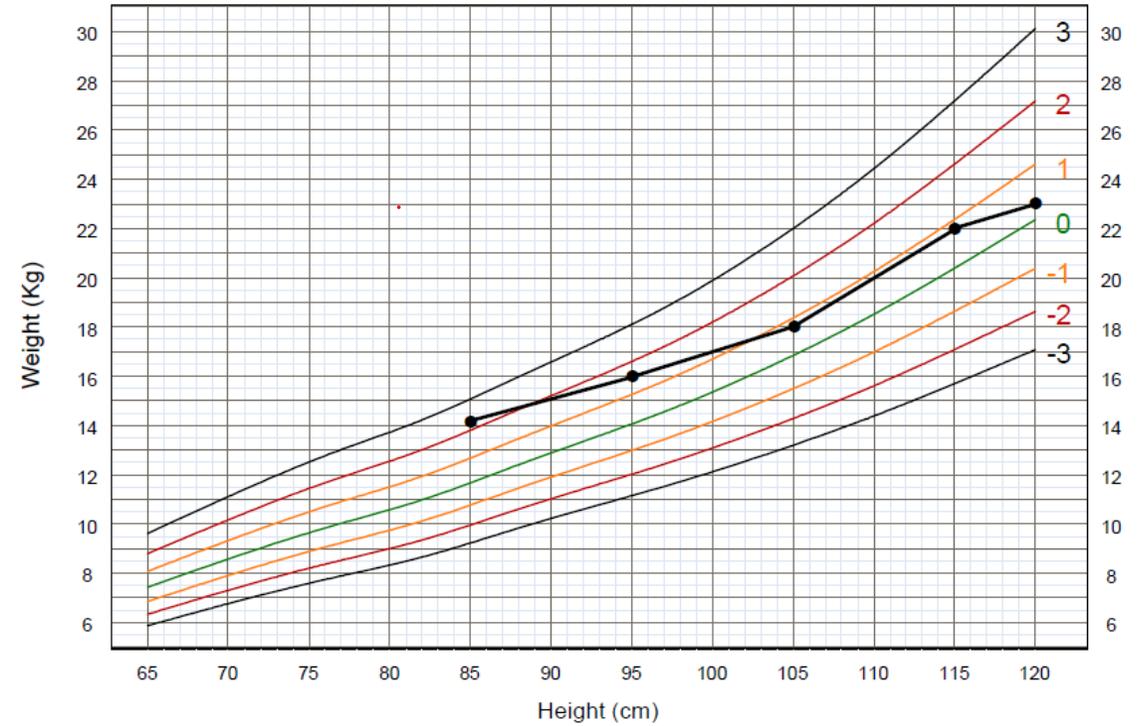

# Crossing z-score lines

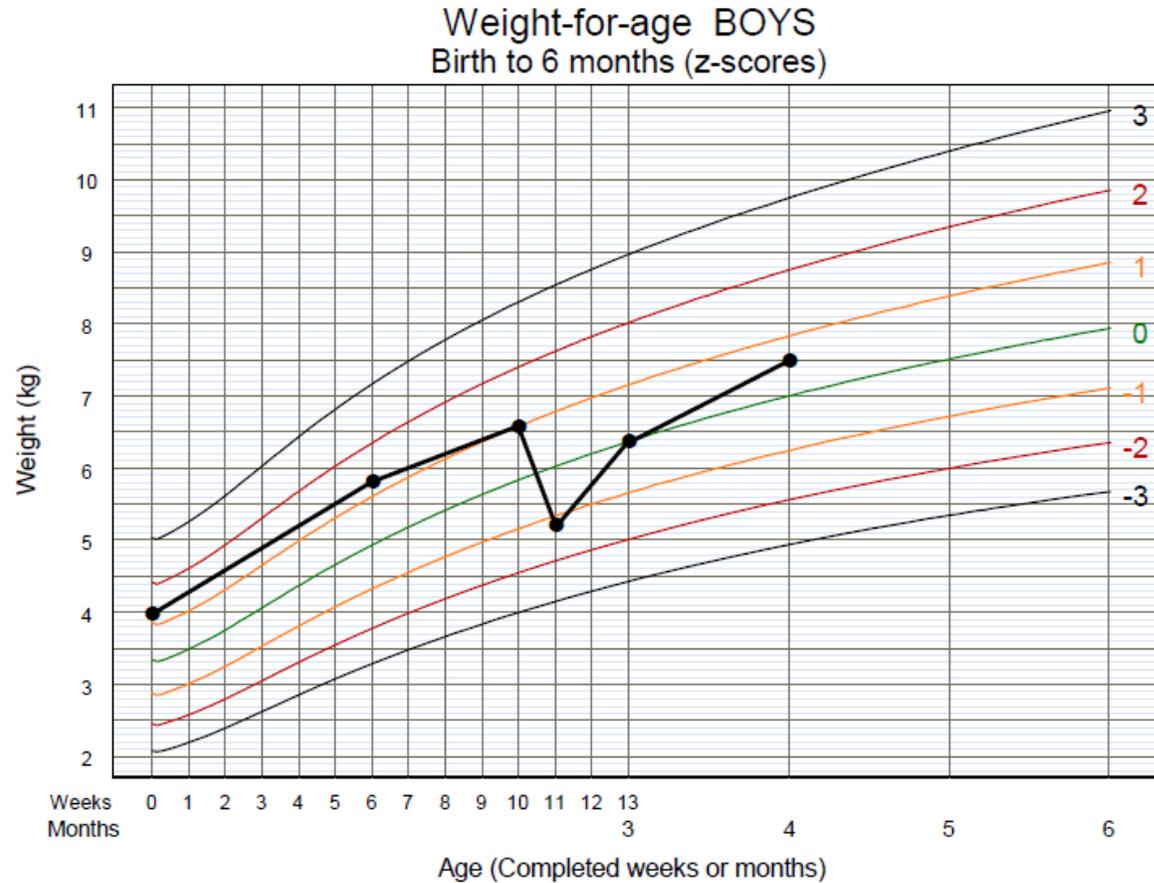

Length-for-age GIRLS  
6 months to 2 years (z-scores)

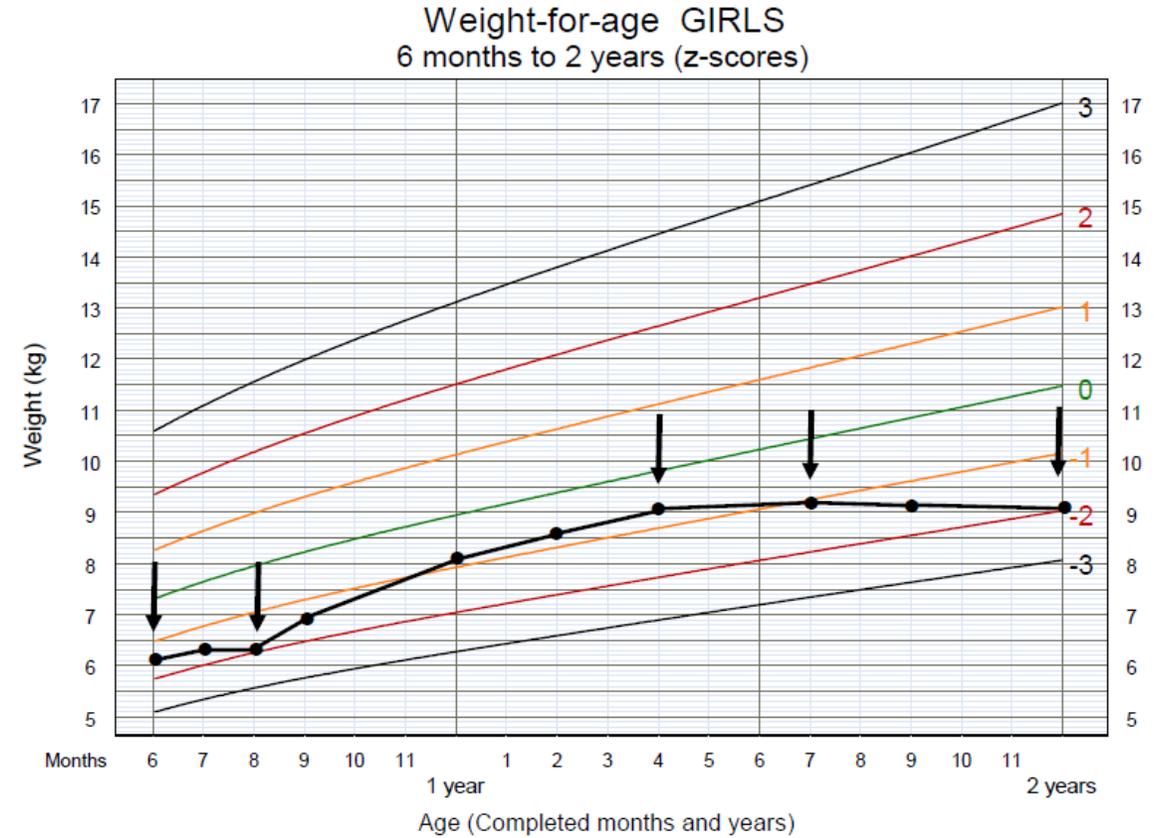

Weight-for-height BOYS  
2 to 5 years (z-scores)

## Sharp incline or decline in the growth line

## Flat growth line (stagnation)

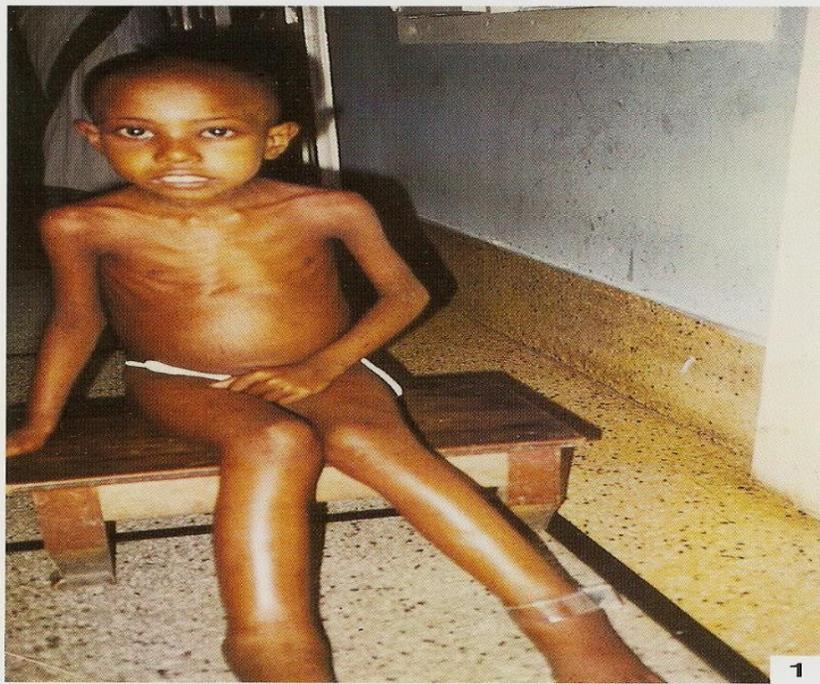

# Recognize signs of severe malnutrition

**Severe wasting**

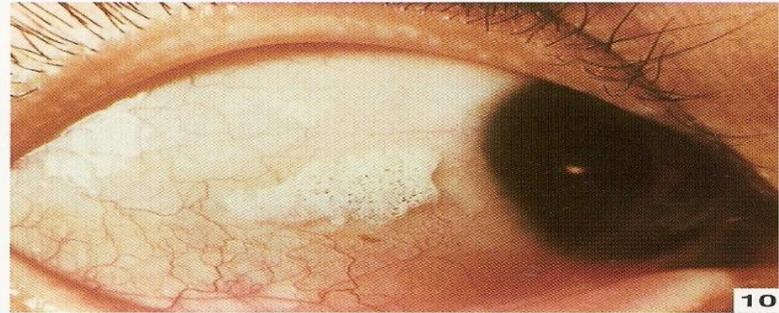

**Oedema**

**Dermatosis**

**Eye signs**

# Examination

**Recognize signs of malnutrition: remove the child's clothes.**

**Look at the front view and the back for:**

- a. Wasting (child's ribs, skin of the upper arms and thighs is loss)**
- b. Edema (+ mild , ++ moderate and +++ severe)**
- c. Dermatitis (+ mild , ++ moderate and+++ severe)**
- d. Eye signs (Bitot's spots, Pus and inflammation, Corneal clouding and ulceration).**
- e. Others**
  - Hair changes, ease of pluckability, sparse and depigmented**
  - Skin (pallor) , mouth (angular stomatitis, cheilosis)**
