## ACID - BASE TITRATION

Titration of a weak acid with strong base Titration of 0.1 M Acetic acid with 0.1 M Sodium hydroxide( NaOH )

## CH 3 COOH

*Percentage \%99
*Specific gravity 1.05
*Molecular weight 60.05
$\mathrm{M}=(1.05 \times 0.99 \times 1000) / 60.05$
$=17.31$
$\mathrm{M}_{1} \mathrm{~V}_{1}=\mathrm{M}_{2} \mathrm{~V}_{2}$
$17.31 \times \mathrm{V} 1=0.1 \times 250$
$V_{1}=1.44 \mathrm{ml}$

## Procedure

1.In a flask, put 10ml of acetic acid by using a pipette, then add 3 drops of phenolphthalien as an indicators by using a dropper .
2. Fill burette with NaOH as a standard solution .
3.Start your titration as shown below until you have first pink color in the flask.
4.Flask was colorless at the beginning of titration ,as acetic acid is a colorless acid and phenolphthalien is colorless in acidic medium as discussed before .
$\mathrm{CH}_{3} \mathrm{COOH}+\mathrm{NaOH} \rightleftarrows \mathrm{CH}_{3} \mathrm{COONa}+\mathrm{H}_{2} \mathrm{O}$
$M_{\text {acid }} \times V_{\text {acid }}=M_{\text {base }} \times V_{\text {base }}$
$0.1 \times 11=\mathrm{M} \times 10$
$\mathrm{M}=0.11$
